*A Render to Reality™ Success Story*

Brazosport High School:

# A Place for Community

C lute, TX, is a near coastal town with access to many beaches along the Gulf of Mexico. Their school district includes the Brazoswood High School, which was in desperate need for a dining commons that was properly equipped to handle their high number of students. Enter the MooreCo space planning team, led by the indomitable Molly Cox and Kim Diaz, who cultivated a vision for a space that satisfied the school district.

The need for a reimagined dining commons was first on the priority list. MooreCo's space planning team swept through and completely redesigned the massive space with a seating capacity of 737 students and faculty. Diversifying the furniture layout was essential; students deserve comfort, community, and space while they take their lunch breaks and commune before and after school.

[Hierarchy Activity Tables](#) in both rectangular and circular shapes are flanked by [Seed Cantilever Chairs](#) with light blue and midnight shells to coordinate with school colors. Students can also take their lunch at the round table tops with [Seed Cantilever Stools](#) in midnight shells.

[Variable Height Ottomans](#) in Evo CV Skylar, Evo CV Bluestar, and Silica Strata Voyage fabrics were added to provide an extra layer of comfort, curved and encircling custom round tabletops in a crisp linen shade. These ottomans enforce good posture and allow students to gather in a circle that brings them closer together while they share a meal. [Orbit MediaSpace soft seating](#) coupled with [Seed Cantilever Stools](#) provide an extra level of privacy for students engaged in personal discussions or study groups.

[Cocoon Community Tables](#) were introduced by the window, allowing the natural light of biophilic design to reenergize those seated there. [Mobile Soft Seating Stools](#) line the tables along the natural curve of the dining area, allowing students to move freely and stay energized. These private areas allow students to study during breaks and keep focused by turning them away from the action.

[Elevate Wind Soft Seating](#) was a modern choice, adding extra comfort to the communal space where students can gather with ease. Coupled with custom square base tables, this soft seating makes the dining

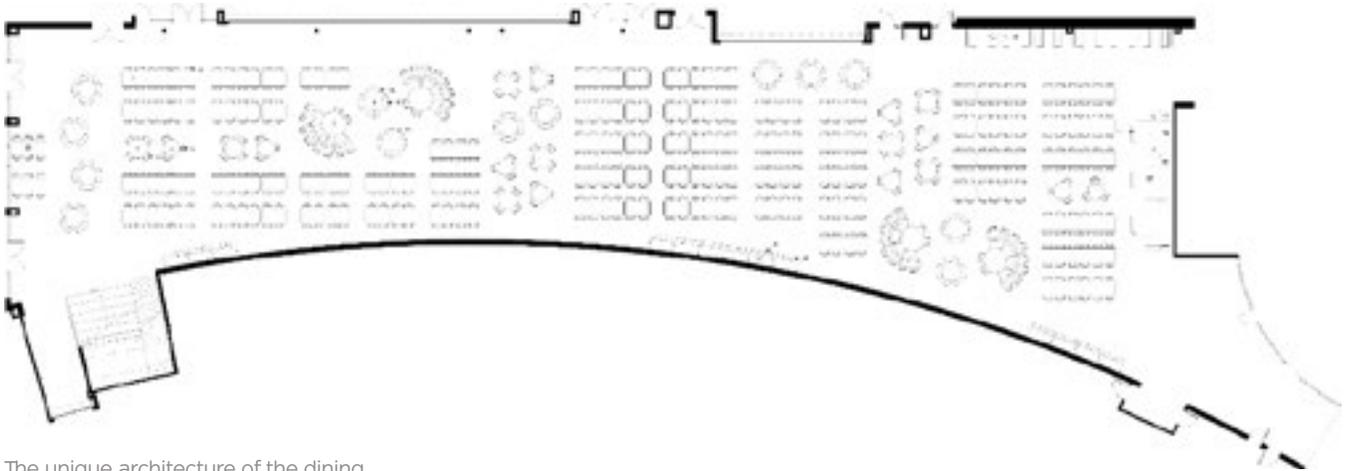

## Brazosport High School: A Place for Community

area feel like a five-star restaurant, giving students the option to squeeze in with fellow peers and share conversation, discussion, group work, and after-school plans.

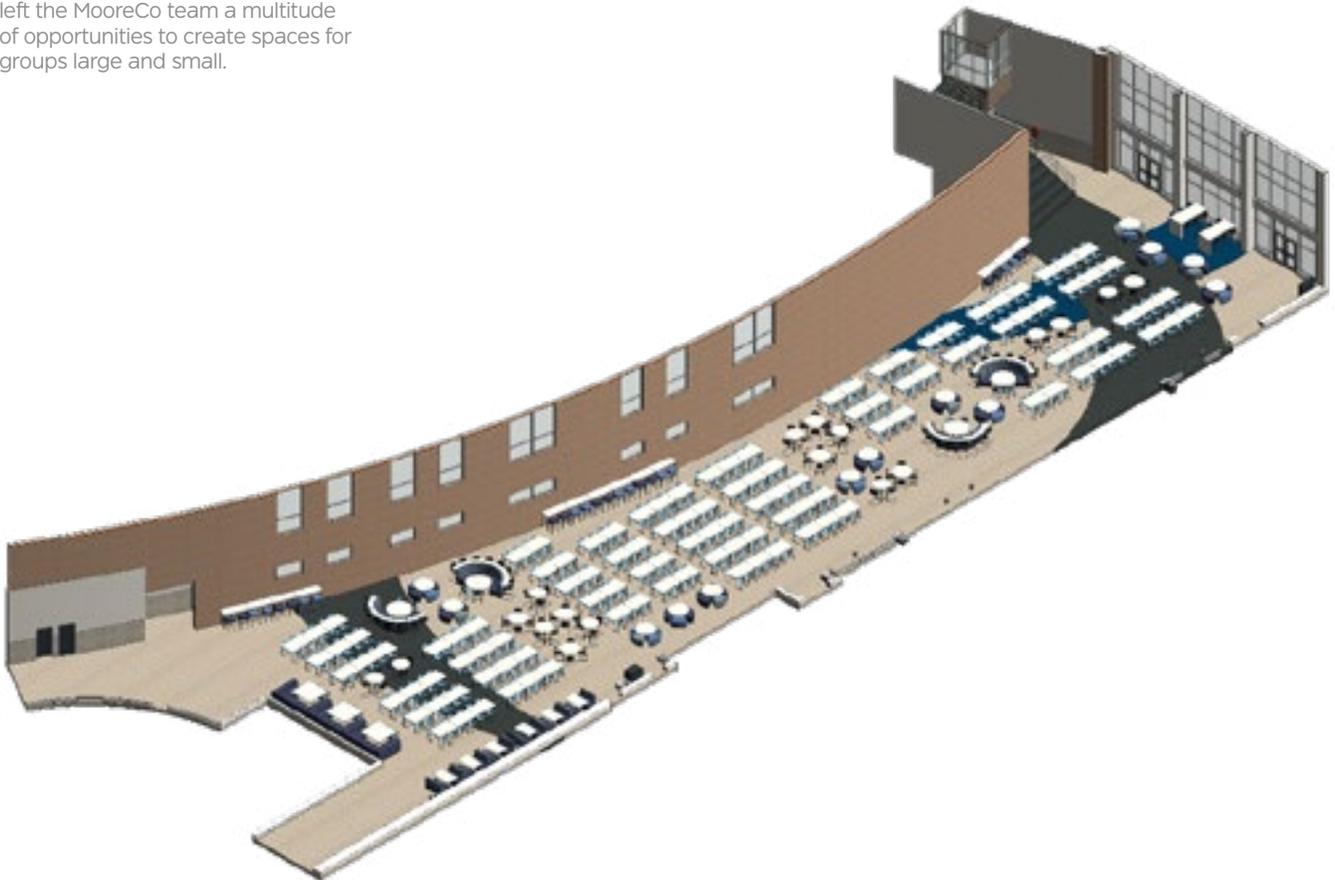

The Brazoswood dining commons was another success story by the MooreCo space planning team. Reimagining the space where students gather for a shared meal, before and after school, and between

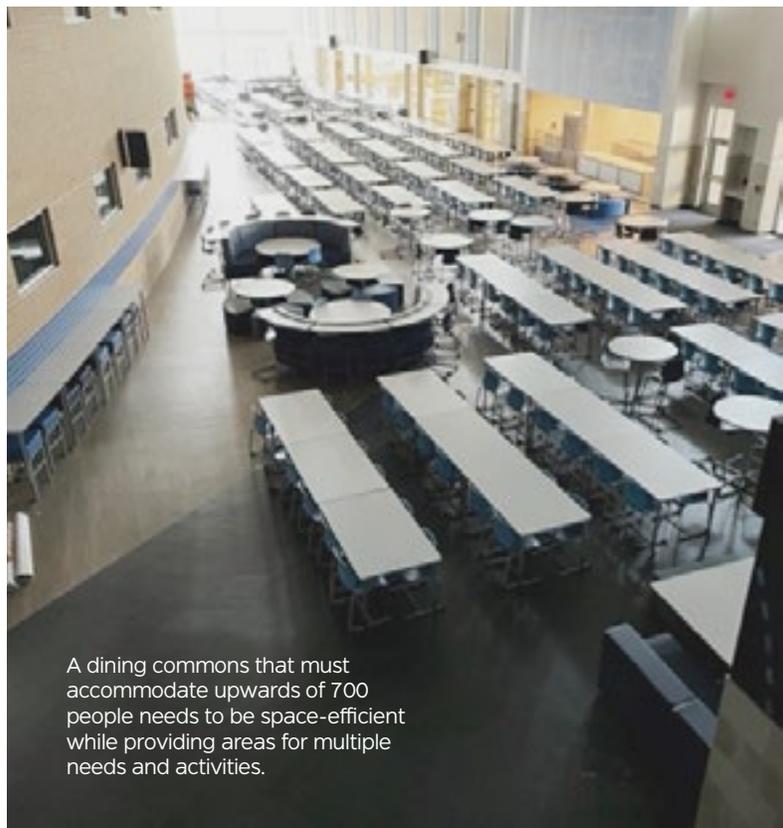

classes, was an important task that required an eye for biophilic design that encourages community, restoration, and rejuvenation. The students at Brazoswood High School will dine comfortably together for years to come. ■

The unique architecture of the dining commons at Brazosport High School left the MooreCo team a multitude of opportunities to create spaces for groups large and small.

A dining commons that must accommodate upwards of 700 people needs to be space-efficient while providing areas for multiple needs and activities.
